

Yuka Estrada works part-time as a Web Administrator and is responsible for the design and implementation of internal and external web pages and applications and daily operations for the WGII website. She develops and maintains a functional, operational and technical expertise to administer and ensure high quality website adhering to IPCC branding and standards. She also acts as technical liaison for all web site applications with the Secretariats, other WGs, technical support and external developers. She has experience in the application of graphic design to communicate complex scientific information. Her past endeavors include the official logo and brochure design for the DIVERSITAS's 2001-2002 International Biodiversity Observation Year. She is also a website manager for the Department of Global Ecology of Carnegie Institution as well as a research technician for the Jasper Ridge Global Change Experiment which Chris Field is PI to study responses of a California grassland ecosystem to climate change. She has a MS in Forest Ecology from Colorado State University, and a Master of Professional Studies in Adult and Extension Education from Cornell University where she researched the role of science in adopting social learning processes for developing effective climate change governance. Her scientific background includes over 10 years of extensive ecological research experience and working as a project manager in plant biodiversity studies in the western US.
